

Summary

- Computer Science master’s graduate from East China Normal University and former Meituan L6 Software Engineer, focused on local life commerce, marketing growth, and AI Agent engineering.

Education

East China Normal University	Computer Science and Technology	B.Eng.	Sep 2017 - Jun 2021	Shanghai
East China Normal University	Big Data Technology and Engineering	M.Eng.	Sep 2021 - Jun 2024	Shanghai

Experience

Hanhai Information Technology (Shanghai) Co., Ltd. (Meituan)	L6	Jul 2024 - Jun 2026
Software Engineer	Core Local Commerce - Business R&D Platform - Medical Health	Shanghai
• Built Meituan medical aesthetics livestream mini-program and SaaS admin features across shelf, detail, checkout, and sharing flows, supporting RMB 1B+ in livestream revenue. • Led or contributed to group-buying marketing integration, user-specific price consistency, and an AI Agent workspace across cross-system, real-time, and desktop Agent scenarios.		

Projects

Private-Domain Livestream Group-Buying Marketing Flow	Mar 2025
• Integrated group-buying configuration into Meituan’s livestream SaaS, initialized SSO/EP/Passport login state, controlled entry visibility, added product-rule prechecks, and validated merchant, livestream, and activity ownership with backend services. • Split shelf, detail, campaign, and checkout responsibilities; rebuilt sharing return context around livestream, campaign, group, and product state, rechecked user eligibility/inventory/group status, and raised per-session viral GTV contribution to 15%.	

Real-Time User-State Consistency for Livestream Shelf	May 2025
• Reworked Pike messages from price sources into refresh triggers; after product changes, reloaded user-specific price, promotion, inventory, and purchasability to align shelf, detail, and checkout behavior. • Designed a 1-second refresh queue with deduplication, batched requests, per-tab refresh, and full-refresh escalation; added timestamp watermarks and current-tab validation to avoid stale overwrites and cross-tab pollution across 10+ event categories.	

Medical AI Agent Workspace	Mar 2026 - Jun 2026
• Converted Runtime events such as model deltas, tool start/results, user confirmation, errors, and completion into a unified frontend message model for text, tool cards, and status displays. • Mapped events to the correct conversation, streaming task, and working directory; combined keep-alive and message persistence to prevent stream mixing, progress loss, and stale overwrites during session switches. • Injected MCP service configuration, discovered tools through the Runtime’s tool-list interface, and loaded Skill summaries/SKILL.md on demand with result trimming, permission checks, and redaction to control context and data risk.	

Skills

- **Frontend:** JavaScript/TypeScript, React, WeChat Mini Programs, Vite, Webpack, Electron, React Native.
- **Full Stack:** Node.js, Koa, Python/Flask, RESTful APIs, authentication, API integration, automation scripts.
- **Data / Agent:** ECharts, D3.js; ReAct, Plan-and-Execute, Tool Calling, MCP/Skill, streaming events, multi-session recovery.
